Homework 13

36-313, Fall 2021

Date by 6 pm on Thursday, 2 December 2021

Please answer as much as you can. I promise that giving me negative feedback on this will not hurt your grade in any way.

1. *Going in*
   a. What did you hope to learn more about by taking this course?
   b. Do you feel that you had adequate knowledge of statistics from your previous classes to handle the topics we covered? Were there specific statistical ideas or tools which you wished you had known more about beforehand?

2. *During*
   a. Which topics do you think we spent too much time on? Was that because the topics were un-interesting (to you), or we went to slow, or we just covered too much detail?
   b. Which topics do you think we spent too little time on?
   c. When the class covered new statistical methods, do you feel like you could keep up, or understand them, at least after doing problems on them? Are there methods you wish we'd spent more time on? Are there methods you already understood well and wish we'd not spent time on?
   d. Was homework too frequent, too infrequent, or about right? How about the length of the homeworks?

3. *Looking back*
   a. Thinking back to your answer to Q1a, do you feel like you did learn more about that topic? Enough? Not enough? Too much?
   b. The class covered both substantive social issues about inequality, and statistical methods used to understand or analyze those issues. Do you wish there was more on the substance, more on methods, or was the balance OK?
   c. What were you most surprised, interested or pleased to learn about in this class? (If anything!)
   d. What's the biggest thing you'd chance about the class?
   e. What's the biggest thing you'd leave alone about the class?
